VISION

IIST strives to become a leading partner in digital transformation solutions and software outsourcing services. Besides that, we place a high priority on the development of technology in two key areas of creating fundamental platforms and technologies, and improving operational efficiency and customer satisfaction.

Our latest technology as well as professional service and consultancy is guaranteed to maximize your potential and benefit.

MISSION

As a mission, IIST desires to offer the most total cost-effective way to customers and focuses on keeping latest technologies to build technical competence and domain expertise. Accordingly, we can bring the true efficiency to satisfy customer requirements about products and services.

WHY CHOOSE US?

Highest commitment to quality and progress

IIST is always committed to fulfilling customer requirements by implementing projects on schedule with the best quality. Our quality management system allows us to track the progress and quality of the project as well as alert issues in real time to solve the problem promptly. We also constantly offer innovative proposals to improve the quality of our services and customer satisfaction.

Not only outsourcing

With more than 12 years of experiences in consulting and implementing many big digital transformation solutions such as SAP, Salesforce and Infor, we not only develop products following customer requirements but also advise customers how to optimize their system architecture and work process to maximize their potential and benefit.

Experience in providing full package service

IIST applies know-how in management process, business domains and technical solutions to propose a packaged solution for each customer requirement. We can effectively accompany customers in all stages of product development life cycle such as business analysis, design, testing, implementation and maintenance in order to provide customers with complete products.

Competitive price

With the advantage of applying a lean and efficient business model, we always optimize management costs to offer customers the most competitive prices. Our working principle is providing the best cost-effective solutions and services.

SAP S/4HANA®

SAP S/4HANA®

Deployable in the cloud or on premise, SAP S/4HANA® is a next generation enterprise management suite that can drive instant value across all lines of business – no matter your industry or business size.

SAP S/4HANA Cloud streamlines and automates best practice business processes while delivering continuous innovation without disruption

Analytics

Embed advanced analytics into your solutions and gain real-time insight

IoT

Quickly develop, deploy and manage real-time IoT applications

Integration

Securely integrate your cloud and on-premise applications

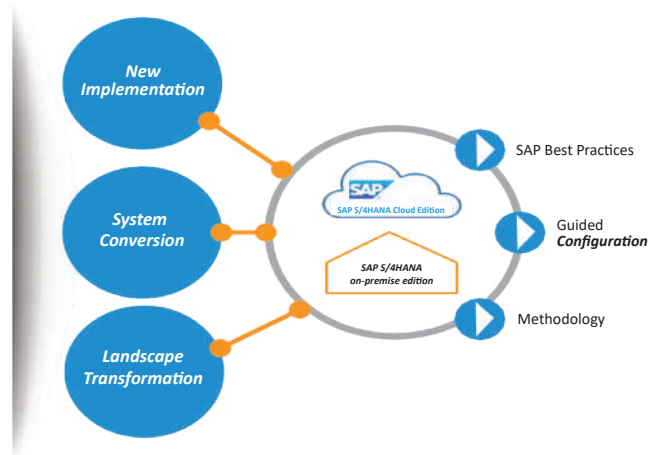

Security

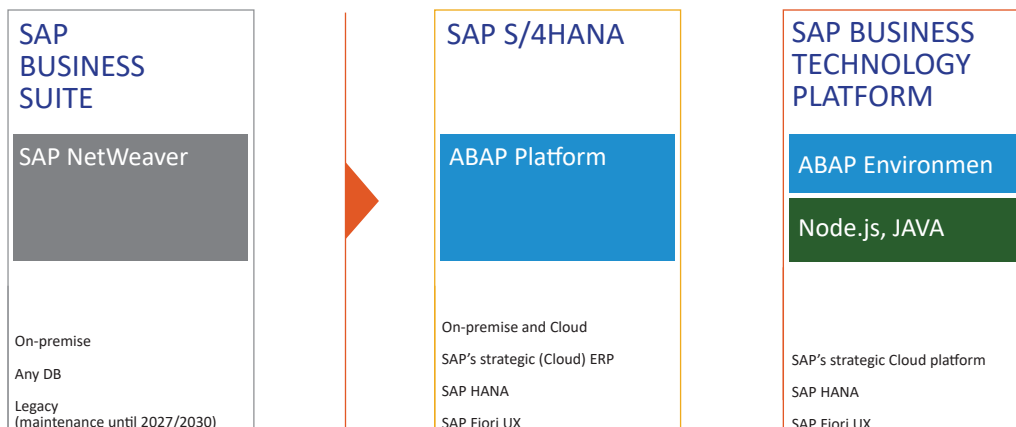

Tightly manage and monitor user access and security service

SAP® Activate Methodology

- One simple, modular and agile methodology supporting all S/4HANA® transition scenarios.
- Full support for initial deployment & continuous business innovation.
- Harmonized implementation approach for cloud, on-premise and hybrid deployments.
- Broad coverage of SAP® solutions starting with SAP S/4HANA®.
- Enablement of co-innovation with customers and is accessible for partners.
- Successor of the ASAP and SAP® launch methodology

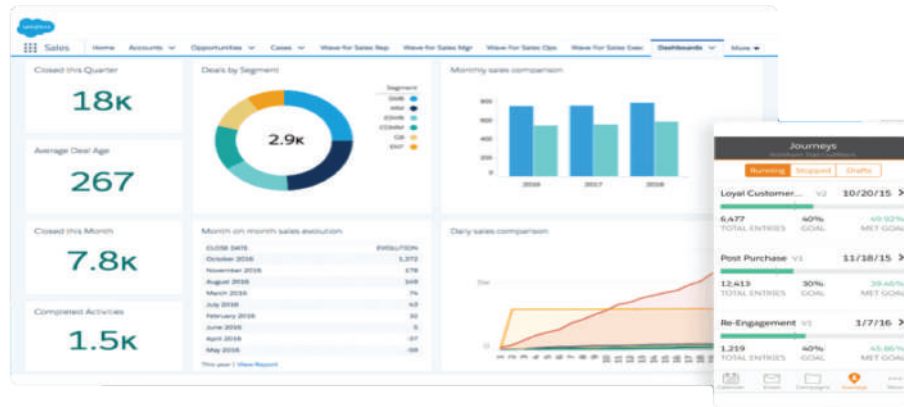

ABAP Platform – Transformation to SAP S/4HANA and SAP BTP

What is Salesforce?

Salesforce is the world's #1 customer relationship management (CRM) platform. We help your marketing, sales, commerce, service and IT teams work as one from anywhere — so you can keep your customers happy everywhere.

What does Salesforce do?

Salesforce unites your marketing, sales, commerce, service, and IT teams from anywhere with Customer 360 — one integrated CRM platform that powers our entire suite of connected apps. With Customer 360, you can focus your employees on what's important right now: stabilising your business, reopening, and getting back to delivering exceptional customer experiences

What is Salesforce used for?

Attract more buyers using personalised marketing.

Win more customers by getting to know their needs and concerns

Deliver the amazing shopping experiences your customers expect.

Respond faster to customer support issues on any channel

Automate time-consuming tasks by building custom apps.

INFOR SYTELINE ERP

Why Infor Syteline?

Expand service revenue

Manage and deliver superior service by leveraging real-time shop floor reporting, a detailed contact center to track profitable service activities, efficient scheduling and work order management tools.

Offer a unique product and experience

Design, sell, and manage unique products with order management, customer relationship management (CRM), project and resource management, markup visibility, and electronic collaboration tools.

Create a backbone for digital transformation

Leverage superior integration, extensibility, collaboration, analytics, and mobile capabilities to drive digital transformation and compete in the Industry 4.0 era.

Reduce operational complexity

Facilitate productivity, planning, and production to improve quality while reducing costs with quality management capabilities, advanced planning and scheduling, repetitive manufacturing tools, asset maintenance, and more.

Optimize the supply chain

Improve visibility across the supply chain and reduce costs with robust capabilities that enable better sourcing and procurement, inventory management, and shipping and receiving, and maximize collaboration with vendors through a secured supplier portal.

Transform your business with vertical industrial focus

Hospitality

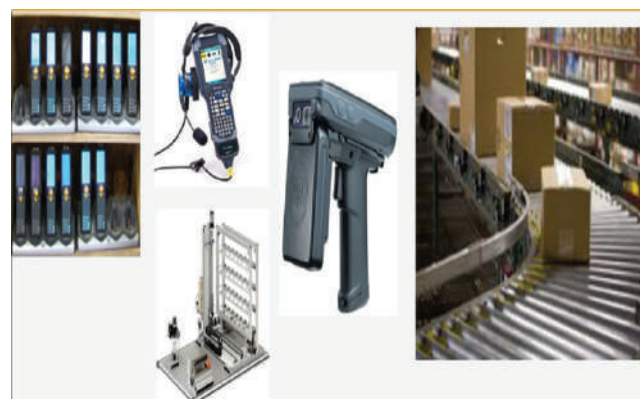

Infor WMS is an advanced warehouse management system combining core warehouse functionality with labor management, task management, wave management, and 3PL management on one highly configurable, scalable database. The contemporary user interface, combined with an open API framework, enables advanced features such as Web RF, 3D visual warehousing, and voice processing, allowing you to manage multiple channels (B2B/B2C) from a single warehouse. With the most current release, Infor WMS is available for deployment on-premise and as a multi-tenant cloud solution – tapping into the trend for increasingly digital supply chains and omni-channel experiences.

Highlights and Core Features

Not a normal warehouse management solution

Supporting all the most advanced technology and modern equipment
